**VI giornata, Fase III**

La costanza delle cifre  
sta caratterizzando  
questo momento  
conclusivo dell'epide-  
mia.

La progressione delle  
Guarigioni sembra

rallentare, come se dovesse trascinarsi per lungo tempo su questi numeri ambigui.

La Lombardia si conferma come il focolaio principale italiano, con una media di circa 200 Nuovi Casi al giorno, ma non è un focolaio circoscrivibile; troppo grande, troppo costoso bloccare una regione così popolosa e ricca di industrie. Però, nel resto d'Italia cresce la paura (immotivata?) per le vacanze dei Milanesi nelle diverse regioni ormai praticamente esenti da contatti.

165 MEDICI

DECEDUTI

LUNEDI' - 08 -06-2020

-

VI giornata - Fase III

Anche le cifre di oggi sono invariate; si conferma una stazionarietà che si avvia pigramente verso una riduzione dell'epidemia, ma non

certo verso una sicura definitiva scomparsa.

La progressione delle guarigioni sembra rallentare, assumere un andamento decisamente più pigro dilatando i tempi della fine dell'epidemia.

Oggi assistiamo ad ottimi numeri per Veneto (4), Toscana (9), Lazio (16), Piemonte (14), Sardegna (0).

La Lombardia conferma invece una molteplicità di contagi con 194 Nuovi Casi sui 280 dell'Italia, una percentuale che sfiora il 70 %.

Continua a salire giorno dopo giorno il tasso di Letalità : 14,43.

In giorni in cui finalmente il numero dei deceduti è in costante discesa, è solo la dimostrazione che il numero degli ammalati o dei Contagiati/Portatori del virus è terribilmente sottostimato, probabilmente di un valore del 500 % (cioè 5 volte).

Guardando i grafici noterete che tutte le linee tendono a perdere forza nel trend positivo che avevano assunto i giorni di fine maggio.

Soprattutto il numero dei "Guariti" rallenta mentre il numero dei Contagi ha brusche risalite, andando ad allungare i tempi della dichiarazione della fase epidemica in Italia.

Speriamo che la circolazione estiva delle persone, per le meritate ed attese vacanze dopo tre mesi di vita difficile, non costituisca motivo di una nuova fase epidemica e nuove insormontabili difficoltà per un S.S.N. in condizioni veramente difficili.

COVID-19 Fase III - Lombardia - Piemonte - Veneto - Toscana - Lazio - Sardegna - Italia - 197 - 125 = 63,4%

Il numero di casi è in crescita, ma non è ancora allarmante. I dati sono ancora preliminari e si attende un picco nei prossimi giorni.
